

TIP OF THE MONTH APRIL 2007

HOW TO KEEP THE POLE FROM ROLLING FORWARD

When the bracket is screwed to the pole, it will be stabilized and will not move. However, sometimes the pole sets down into a decorative bracket and is not actually attached. A treatment that puts weight on front of the pole will cause the pole to roll forward.

Solve this problem by putting a strip of adhesive hook and loop tape (Velcro®) between the bracket and pole.
